

Concrete Sleeves

Plastic Hole Forms

OCM Inc's Concrete Sleeves are injection molded from high strength yet flexible polyethylene. They save labor, because they are tapered and can easily removed after the forms have been stripped.

OCM Concrete Sleeves may be telescoped or cut to accomodate any slab thickness and are easy to cut with a utility knife.

- Remove easily from slab due to tapered design.
- Creates a smooth round hole every time.
- Won't dent or bend.
- Tapered at 1" increments for easy removal and cutting in the field.
