

## Semi-Assembled Overhang Bracket

OCM Overhang Brackets arrive on site in easily assembled sections. The Overhang Brackets arrive semi assembled prior to shipment. The following illustrates how the material will arrive with easy instructions for final assembly.

Crate shown immediately after opening

Separated Parts in Crate

- Each row of brackets has the 2 sections easily sorted. Essentially it is two parts:
  - A top channel with fully assembled diagonal leg
  - An assembled vertical leg.

- The outer diagonal and inner diagonal are attached to each other and to the top channel itself, so fully assembled there.
- 1 - The inner and outer vertical are attached to each other . Inner Vertical is attached to top Channel
- 2 – The final bottom connection between the diagonal and vertical is typically a field connection to fit to the specific beam configuration.
