

Sealing Vinyl/Composite Piles with A-30

ADEKA ULTRASEAL® A-30 will provide a cost effective watertight interlock.

Measure gap between interlocks (Figure 1).

Level sheet pile open interlock facing up. Plug or tape ends.

Pour A-30 into the level interlock to a depth slightly more than 1/2 of the measured gap.

For example—if gap is 1/8", apply approximately 1/16"+.

Keep piles level until A-30 is cured to a firm rubber.

Protect from moisture prior to driving.
