### TYPICAL USES

P-201 will expand up to 2 times (100%) by volume in the presence of water. It will expand in the direction of least resistance. When expansion is inhibited, the product will produce expansion pressure against the resisting substance. This expansion pressure will effectively seal off water penetration. The amount of concrete coverage required depends on bead size. The coverage may range from 2" (1/4" bead) to 4" inside a double mat of rebar (1/2" bead). Bead size also determines hydrostatic head resistance
