

TURBO-SEAL R

Turbo-Seal R is used only for repairing leaking structures. Turbo-Seal R is applied through injection. Turbo-Seal R is injected through to the positive side of **horizontal substrates** either from drilling above the substrate (floor injection) or below the substrate (ceiling injection).

Use Turbo-Seal R whenever you are repairing a leak on a horizontal surface.

Areas of Applications:

- Leaking plaza decks
- Leaking floor slabs
- Floor slabs with vapor transference
- Leaking concrete roof decks
- Leaking below-grade ceilings

Turbo-Seal R Application

Horizontal Ceiling Injection with high pressure injection pump

Horizontal Slab Injection with rotor/stator
